^{*} County no longer accepts fiberglass boats for reef construction

Artificial reefs have been constructed in Sarasota County to increase and enhance recreational fishing and scuba diving areas as well as to create and restore marine habitat lost to coastal development. Remember to use proper catch and release fishing practices.

Avoid propeller cuts through the sea grass beds. These scars take at least five to ten years to heal. Sea grass beds are vital nursery areas providing food and shelter for fish and other marine life. Please use extreme caution in shallow waters.

Please be aware that manatees inhabit our waters. The Florida manatee is a gentle, harmless creature who lives on a diet of

aquatic plants. Although a protected species, many are killed or injured each year through human carelessness, marine debris and motorized vessels.

Funding for the construction of artificial reefs comes from the Florida Artificial Fishing Reef Grant, Saltwater Fishing License fees, the Sarasota Bay National Estuary Program, Sarasota County Coastal Resources, Eternal Reefs, Inc. and private donations.
