## Charlotte Harbor National Estuary Program Oyster Habitat Restoration Plan *December 2012*

This Oyster Habitat Restoration Plan is the product of a partnership between the CHNEP and The Nature Conservancy (TNC). The purpose of the Plan is to provide a technically sound, consensus-based approach for identifying oyster habitat restoration goals, methods and partnerships for the estuaries within the CHNEP. It provides the guidelines for native oyster habitat restoration within the CHNEP study area using a regional partnership approach. A Restoration Suitability Model (RSM) was developed as part of the plan to help guide future restoration decisions within the CHNEP study area, and progress towards the CHNEP restoration goal.
